

Orange = lower priority		
<b>As I Student, I want to...</b>	<b>Notes</b>	
Create an account		
Log in to my account		
Reset my password		
Receive a new question once a day (Sun-Thurs only) at the same time	Questions will come from a pre-written list of questions	
Receive an email notification every time a new question is available	As the questions will be received at the same time on set days, these notifications could be 'hard coded' rather than reactive. (This could be done through Mailchimp to save development time)	
As a new question is received, see the date displayed above the question on the messaging screen		
Write a reply to a question		
- See the question at the top of the screen while I write a reply	Once in the database, the submitted text does not need to be associated with the question	
- Have a word limit on my reply	Students allowed to either write 50 or 100 words, specified by the admin (see row 31)	
- See how many words my reply contains, as I write		
- Have my computer/phone's built-in spell check work on the text as I write	May happen as standard, but worth mentioning	
- Have the option to exit the writing screen and return to the messaging screen		
Submit my reply to a question, which is added to the database		
Only reply to a question once	Once it's been answered, the 'reply' button should disappear	
Submit replies to a maximum of 2 questions per day	Relevant when a question from a previous day was left unanswered. (Alternative: Questions stay 'answerable' for 3 days, then the reply button deactivates.)	
Immediately see the submitted reply appear on the messaging screen		
View the corrected version of the text on the messaging screen (after it is processed by the Admin)		
- See formatting (colour, strikethrough, hyperlinks) on the corrected text		
- See a message containing any accompanying fixed response from the admin	These are fixed responses added by the Admin in Wordpress when processing the text	
Send a fixed response to the chat, with a button - choice of 3 responses ('ok', 'thanks', smiley face)	Responses don't need to be saved to the database. They just appear 'locally' within the app.	
See a menu with links to about 4 pre-existing pages		
Submit a first text as a 'free trial' before creating an account		
- Open the app for the first time with 4 messages already on the messaging screen (2 messages, then a 'typing' icon, then 2 more)		
- Press a 'dummy' text entry bar to open the 'reply' screen (as described in row 4)		
- Submit the text and be asked to sign up by entering email, password, native language		
- After signing up, see a message on the messaging screen explaining what happens next		
- Receive an email 24 hours after submitting the text to tell me to check for the corrections		
<b>As an Admin, I want to...</b>		
<b>Perform various 'user management' tasks</b>		
- Subscribe a student to the next 20 questions, by entering their email address	Students pay for 20 questions (4 weeks) at a time	
- For a student's first month, specify whether they start at Question 1 or Question 21	The first 20 questions will be lower level and students will have the option to skip them	
- Specify whether a student is allowed to write 50 words or 100 words in their replies		
View a submitted text in the MySQL database (Wordpress), linked with a student's account ID	Could ask my existing Wordpress developer to do this	
- See a list of all un-corrected texts, with a time stamp for when the text was submitted	Could ask my existing Wordpress developer to do this	
- Click to correct a text (which goes to the existing text correction page)	Could ask my existing Wordpress developer to do this	
Correct the text (with quick + easy formatting) and submit the corrected text back to the database	ALREADY DEVELOPED IN WORDPRESS	
Add a pre-defined 'note' to accompany the corrected text - choice of 5 notes (eg. 'Good work')	Could ask my existing Wordpress developer to do this
